

GENOMSYS

Building the open genomic stack

GenomSys builds interoperable, secure and scalable applications on the MPEG-G standard — for clinical genomics, blood typing and patient-controlled DNA.

WHO WE ARE

A genomics-technology company and contributor to the MPEG-G standard, headquartered in Italy, working with clinical, research and industry partners worldwide.

WHAT WE BUILD

From the low-level MPEG-G Suite to clinical applications (Variant Discovery, Hemotyper) and the consumer-facing GenomSafe, our products share one open, interoperable foundation.

OUR PRINCIPLE

Genomic data should be compact, portable, and controlled by the people it describes. Open standards make that possible.

KEY CAPABILITIES

- MPEG-G standard contributor
- Clinical & research genomics
- Sequence-based blood typing
- Patient-controlled data ownership
- Open, interoperable architecture
- Partners across EU, MENA & beyond
